China Steel Corporation installs steam jet pump in No. 1 RH facility

Revamp of secondary metallurgy facility by SMS Mevac
boosts efficiency and flexibility

At CSC, SMS Mevac is going to equip the existing No.1 RH facility with a steam jet vacuum pump, making operation of the plant more efficient and flexible.

Taiwanese steel producer China Steel Corporation (CSC) has awarded SMS Mevac, an SMS group company, the order to revamp the oldest of the RH units (Ruhrstahl Heraeus) at its No. 1 steel works in Kaoshiung. SMS Mevac will equip the RH unit with a new, state-of-the-art four-stage steam jet vacuum pump.

In 1982, the No. 1 RH facility (160 tons) had been commissioned and, in 1990, SMS Mevac had

modernized it in a record time of only 73 days. CSC uses the facility for hydrogen degassing in the production of high-grade heavy plate.

SMS group's supply scope includes the design of the layout, the engineering, manufacturing and supply of the equipment, and commissioning, which will take place in 2020.

Thanks to the increased extraction capacity of the new pump to 600 kilograms per hour at 0.67 mbar, it is easier to compensate system leakages and evacuation times will be shorter. Additionally, the new vacuum pump can be operated at condenser cooling-water temperatures of up to 38 degrees Celsius, boosting the flexibility of the RH unit, especially during the hot summer months.

SMS group is a group of companies internationally active in plant construction and mechanical engineering for the steel and nonferrous metals industry. It has some 14,000 employees who generate worldwide sales of more than EUR 2.8 billion. The sole owner of the holding company SMS GmbH is the Familie Weiss Foundation.
